WHAT IS CLAIMED IS:

1

2

3

1

1

2

3

- 1. A system of binding sheets into a bound text body, comprising:
 2 a multi-function sheet binder configured to heat a preformed solid hot melt
 3 adhesive to a melting temperature, form the melted adhesive by pressing the melted
 4 adhesive into a spine of a text body and folding down edges of the melted adhesive
 5 into contact with the text body, and actively cool the formed adhesive.
- The system of claim 1, wherein the multi-function sheet binder comprises a tool carrier having separate sides respectively supporting an adhesive heater tool, an adhesive former tool and an adhesive cooler tool.
 - 3. The system of claim 2, wherein the tool carrier is rotatable about an axis so that the separate tools of the tool carrier respectively may be positioned to act upon a preformed solid hot melt adhesive disposed over the text body spine.
- 4. A system of binding sheets into a bound text body, comprising:
 a spot heater configured to heat one or more localized areas of a solid hot
 melt adhesive to a temperature sufficient to tack the hot melt adhesive to a text body
 spine.
 - 5. The system of claim 4, wherein the spot heater comprises an elongated clamp supporting one or more spaced apart heating elements.
 - 6. The system of claim 4, further comprising a solid hot melt adhesive dispensing system incorporating the spot heater and configured to dispense a solid hot melt adhesive over the text body spine and to cut dispensed adhesive to width.
- 7. A system of binding sheets into a bound text body, comprising:
 an adhesive former configured to press a localized region of a preformed
 heated solid hot melt adhesive into a spine of a text body and to fold down edge
 regions of the preformed solid hot melt adhesive into contact with the text body.

- 1 8. The system of claim 7, wherein the adhesive former comprises a 2 compliant roller configured to press the localized region of the preformed heated 3 solid hot melt adhesive into the text body spine.
- 9. The system of claim 7, wherein the adhesive former comprises a pair of pinch rollers configured to fold down edge regions of the preformed solid hot melt adhesive into contact with the text body.
- 1 10. The system of claim 7, wherein the adhesive former is configured to traverse the text body spine.
- 1 11. A method of binding sheets into a bound text body, comprising:
 2 advancing over a preformed solid hot melt adhesive disposed over a spine of a
 3 text body a multi-function sheet binder comprising a tool carrier having separate
 4 sides respectively supporting an adhesive heater, an adhesive former and an
 5 adhesive cooler;
- heating the preformed solid hot melt adhesive to a melting temperature with the adhesive heater;
 - forming the melted adhesive with the adhesive former by pressing the melted adhesive into the text body spine and folding down edges of the melted adhesive into contact with the text body; and
- cooling the formed adhesive with the adhesive cooler.

8

10

- 1 12. The method of claim 11, wherein the preformed solid hot melt adhesive 2 is heated, formed and cooled by rotating into position a respective side of the tool 3 carrier.
- 1 13. The method of claim 11, wherein a localized region of the melted 2 adhesive is formed and, subsequently, remaining regions of the melted adhesive are 3 formed
- 1 14. The method of claim 11, wherein, before the multi-function sheet 2 binder is advanced over the solid hot melt adhesive:
- a solid hot melt adhesive is dispensed over a spine of a text body;

one or more localized areas of the dispensed adhesive are heated to a temperature sufficient to tack the hot melt adhesive to the text body spine; and the tacked adhesive is cut to width.

6 7

- 1 15. A method of binding sheets into a bound text body, comprising:
 2 dispensing a solid hot melt adhesive over a spine of a text body;
 3 heating one or more localized areas of the dispensed adhesive to a
 4 temperature sufficient to tack the hot melt adhesive to the text body spine; and
 5 cutting the tacked adhesive to width.
- 1 16. The method of claim 15, further comprising heating the cut adhesive to 2 a melting temperature.
 - 17. The method of claim 16, further comprising forming the melted adhesive by pressing the melted adhesive into the text body spine and folding down edges of the melted adhesive into contact with the text body.
 - 18. The method of claim 17, wherein a localized region of the melted adhesive is formed and, subsequently, remaining regions of the melted adhesive are formed.
- 1 19. A method of binding sheets into a bound text body, comprising:
 2 forming a localized region of a preformed heated solid hot melt adhesive by
 3 pressing the localized adhesive region into a spine of a text body and folding down
 4 into contact with the text body edge regions of the preformed solid hot melt adhesive
 5 adjacent to the localized region;
 - subsequently forming remaining regions of the preformed solid hot melt adhesive to the text body spine.
- 1 20. The method of claim 19, wherein the localized region of the heated 2 adhesive is formed to a centrally located region of the text body spine.
